About Boxoft Duplicate Music Finder

Boxoft Duplicate Music Finder is a simple, lightning-fast MP3 comparison tool and audio files comparison tool that lets you to find duplicate audio files and sort them in whatever way you want.

The main difference between Boxoft Duplicate Music Finder and other duplicate MP3 finders is the fact that Boxoft Duplicate Music Finder "listens" to your audio files and compares them by their actual audio content, just like your own human ears do. However it's much faster and it never forgets a sound it's heard just once, thus it doesn't matter what compression type or encoding bit rate your audio files have, Boxoft Duplicate Music Finder is able to recognize them by the sound. Contrast this technology with other MP3 comparison tools that just look at MP3 file tags or even crude file size to locate duplicate files and can't identify similar audio files at all.

Boxoft Duplicate Music Finder will help you to find fast all similar or exact duplicate audio files in a folder and its subfolders.. You can specify a percent of audio similarity - about 80% is a good choice. You can also choose fast hash or file size algorithms in order to find exact duplicate mp3 files. When the scan process is finished the program shows you all audio file duplicates in groups and can automatically mark the smaller bitrate, shorter length and/or smaller file size files for deletion (the lower quality ones). With a couple of mouse clicks you can get rid off all duplicate audio files and save valuable disk space. You can also backup your duplicates as the tool can move them also to a specified folder maintaining the directory structure. Supports MP3, MP2, MP1, MPA, WAV, OGG, AIFF, AAC, MP4, FLAC, AC3, WavPack (WV), Musepack (MPC) and Windows Media Audio (WMA) file formats, has an intuitive user interface and is well documented.

Boxoft Duplicate Music Finder features:

- Find all similar or exact duplicate audio files in user specified folders using audio compare of the file contents
- Find exact duplicate audio files using fast hash checksum algorithm
- User can adjust the percent of audio similarity
- Lower bitrate audio files can be automatically marked for deletion

- Shorter duration audio files can be automatically marked for deletion
- Smaller file size audio files can be automatically marked for deletion
- Older audio files can be automatically marked for deletion
- Integrated audio player to preview the audio duplicates
- User can manual select the duplicate audio files for deletion
- Duplicate audio files can be moved to Recycle Bin, custom folder or deleted permanently

Supported file formats:

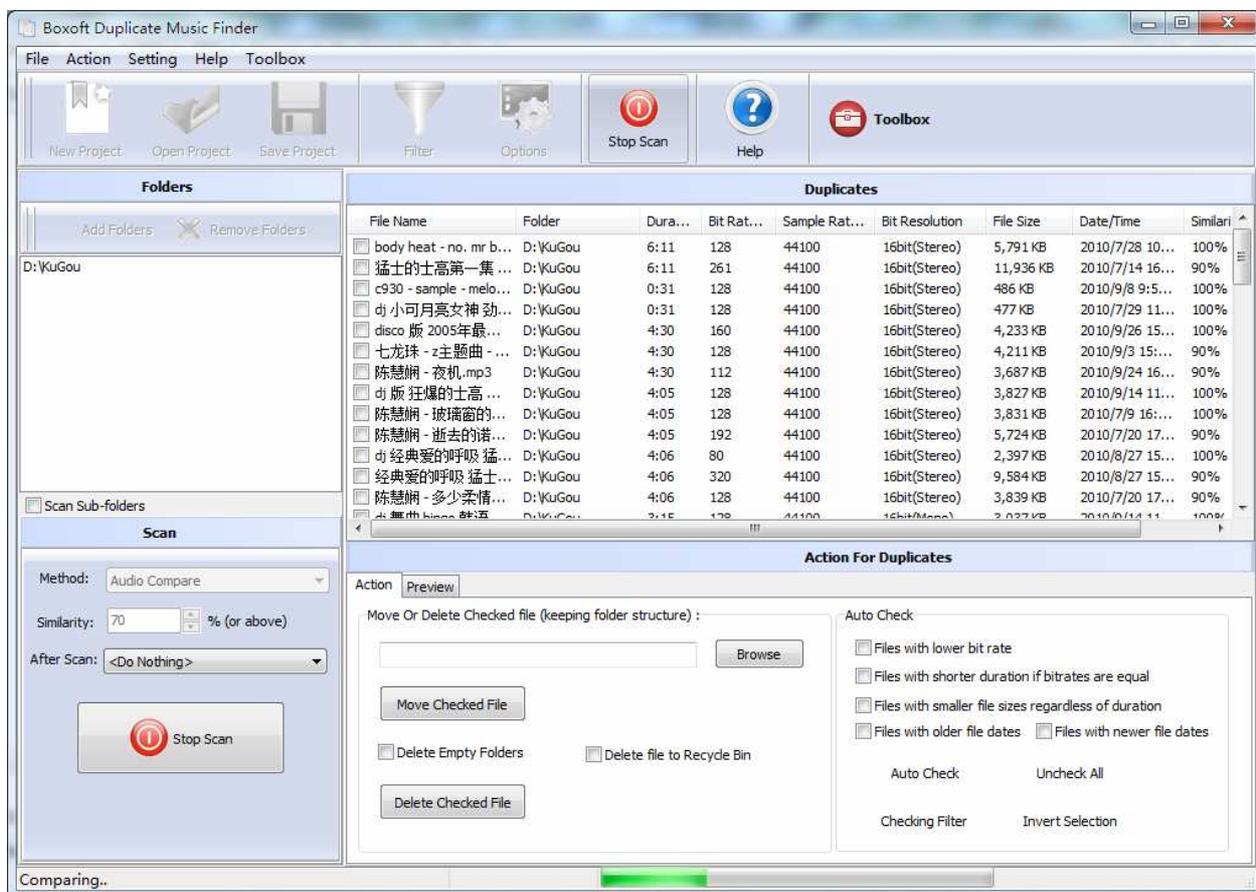

- AAC Files (*.aac; *.mp4, *.m4a) - iTunes, iPod, iPhone Audio Files including Apple Lossles audio
- AC3 Files (*.ac3)
- Audio IFF Files (*.aif; *.aiff)
- FLAC Files (*.flac)
- MPEG Audio Files (*.mp3;*.mp2;*.mp1;*.mpa)
- Musepack Files (*.mpc)
- OGG Files (*.ogg)
- WAVE Files (*.wav)
- WavPack Files (*.wv)
- Windows Media Audio Files (*.wma)

Using Boxoft Duplicate Music Finder

Boxoft Duplicate Music Finder can be started either by launching the application via a desktop shortcut, or directly from within Windows/Windows Explorer.

When you start the program, you will be presented with the primary screen from which all actions are taken.

Folders

Add Folder

Press Add Folder to add folders to scan. If the option "Scan subfolders" is checked then all subfolders of the added folders will be scanned too

Remove Folder

Press Remove Folder to remove the selected folder from the list Press Add Folder to add folders to scan. If the option "Scan subfolders" is checked then all subfolders of the added folders will be scanned too

Remove Folder

Press Remove Folder to remove the selected folder from the list

Scan

Scan

There are two types of scanning methods - acoustic (Audio Compare) and non-acoustic (Checksum, File Size). Audio Compare is the slowest method. It uses complex algorithms and tries to "listen" to the audio and can find duplicate audio files with

different bitrate, length and frequency. The "100% Identical Files" method ensure that the audio files will be absolutely the same. The File Size method is the fastest but it can give inaccurate results since there can be two audio files with the same file size but with different contents.

Select the "Method" you want to use for scanning for duplicates.

- "Audio Compare" will compare the audio files using complex algorithms and can find duplicate audio files with different bitrate, length, frequency or channel count.
- "100% Identical Files " method will find only 100% binary equal audio files.
- "File Size" method will find audio duplicates with equal file sizes.

Enter the minimum audio "Similarity" in % to consider the files as duplicates. The default similarity value is 70%.

Note: Similarity value is used only when the selected method is "Audio Compare".

Start Scan

Press Start Scan to start searching for duplicates.

Auto Check

- Files with lower bit rate
- Files with shorter duration if bitrates are equal
- Files with smaller file sizes regardless of duration
- Files with older file dates Files with newer file dates

Files with lower bitrate

If this option is checked the duplicate audio files with lower bitrates from the same group of duplicates will be checked automatically for deletion. It is recommended this option to be checked.

Files with shorter duration if bitrates are equal

If all duplicates in the same group have equal bitrates use this option to automatically mark the shorter duration files. It is recommended this option to be checked.

Files with smaller file sizes regardless of duration

If this option is checked the duplicates with smaller file sizes will be automatically marked. The options Files with lower bitrate and Files with shorter duration if bitrates are equal will be unchecked since they have no effect in this case.

Files with older file dates

If this option is checked the duplicates with older file modified dates will be automatically marked. The other auto check options have no effect in this case

Files with newer file dates

If this option is checked the duplicates with newer file modified dates will be automatically marked. The other auto check options have no effect in this case

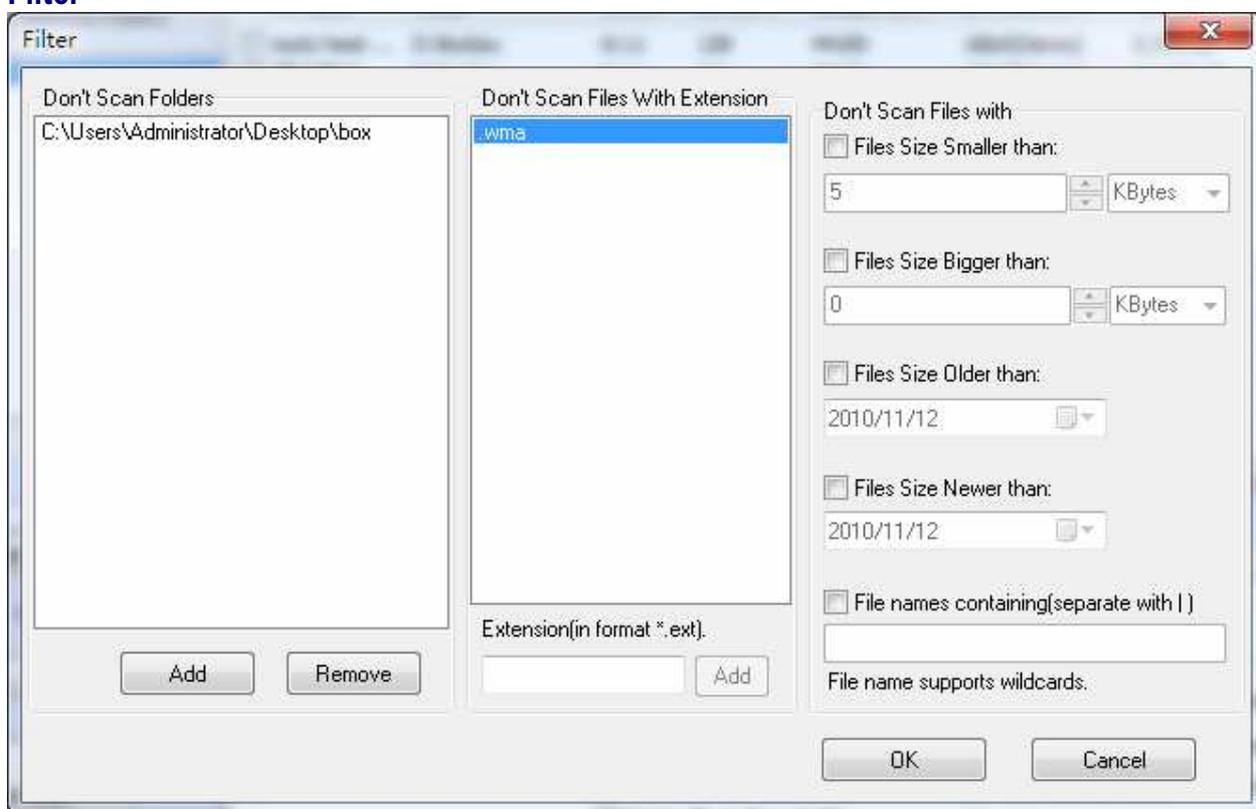

Auto Check

Press this button to automatically check the appropriate duplicates regarding the options you've checked above the button

Uncheck All

This will uncheck all selected duplicates from the list

Filter

Filter settings allow you to exclude files or folders from the scanning process.

Don't scan folders

Add folders which you do not want to scan. This option is useful if you want to scan folder recursively, but don't want to scan some of the folders inside it..

Don't scan files with extensions

Add here the files extensions you don't want to scan. All extensions must be in the format *.ext, e.g. start with *. For example *.wav, *.wma

Don't scan files with

You can adjust which file sizes, file dates and/or names you don't want to be scanned at all for duplicates.

Ending Your Session

When you have completed your work, choose the **File** option and select **Exit** from the dropdown list.
